

Coding Theory and Algebraic Geometry: Proceedings of the International Workshop Held in Luminy, France, June 17-21, 1991

By -

Springer. Paperback. Book Condition: New. Perfect Paperback. 232 pages. Dimensions: 9.2in. x 6.1in. x 0.6in. About ten years ago, V. D. Goppa found a surprising connection between the theory of algebraic curves over a finite field and error-correcting codes. The aim of the meeting Algebraic Geometry and Coding Theory was to give a survey on the present state of research in this field and related topics. The proceedings contain research papers on several aspects of the theory, among them: Codes constructed from special curves and from higher-dimensional varieties, Decoding of algebraic geometric codes, Trace codes, Exponential sums, Fast multiplication in finite fields, Asymptotic number of points on algebraic curves, Sphere packings. This item ships from multiple locations. Your book may arrive from Roseburg, OR, La Vergne, TN. Perfect Paperback.

Reviews

This book is definitely not straightforward to get started on studying but extremely exciting to read. It is really simplistic but shocks in the 50 percent of the ebook. Once you begin to read the book, it is extremely difficult to leave it before concluding.

-- **Ally Reichel**

This publication is amazing. It is definitely basic but shocks in the fifty percent of your publication. You won't feel monotony at anytime of your own time (that's what catalogues are for concerning if you question me).
