

## Chemistry, Inorganic and Organic, with Experiments (Paperback)

Filesize: 2.63 MB

### ***Reviews***

*This publication is definitely not simple to begin on studying but really exciting to read. It is actually rally fascinating through reading time. Your life span will be enhance when you complete looking at this publication.*

*(Laurence Littel)*

## CHEMISTRY, INORGANIC AND ORGANIC, WITH EXPERIMENTS (PAPERBACK)

Rarebooksclub.com, United States, 2012. Paperback. Book Condition: New. 246 x 189 mm. Language: English . Brand New Book \*\*\*\*\* Print on Demand \*\*\*\*\*.This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1895 Excerpt: . easily imparts oxygen to other substances; sulphur, mixed with six times its weight of  $\text{PbO}$ ., may be ignited by friction; hence this oxide is a common ingredient in lucifer-match compositions. Its oxidising property is frequently turned to account in the laboratory; for example, in absorbing sulphur dioxide from gaseous mixtures by converting it into sulphate of lead;  $\text{PbO} + \text{SO}_2 = \text{PbSO}_4$ . Dioxide of lead is not dissolved by dilute acids, and has no basic properties, although certain salts of the type  $\text{PbX}_4$  are known; it is even sometimes called plumbic anhydride, for it acts upon potassium hydroxide, yielding potassium plumbate ( $\text{K}_2\text{PbO}_4$ ), which has been crystallised from an alkaline solution, but is decomposed by pure water. Lead dioxide evolves  $\text{O}_2$  from  $\text{HCl}$  when heated, and gives, at first, a brown solution (containing  $\text{PbCl}_4$ ) which yields a brown precipitate with ammonia, but if the solution be boiled till all the  $\text{Cl}$  is expelled, it becomes colourless  $\text{PbCl}_2$ , and gives a white precipitate with ammonia.  $\text{PbO}$  is converted into  $\text{PbO}_2$ , by ozone and by hydrogen peroxide. Lead hydroxide,  $\text{Pb(OH)}_2$ , has not been obtained, but  $\text{Pb(OH)}_2 \cdot \text{PbO}$  is formed as a white precipitate when air and water, free from  $\text{CO}_2$ , attack lead. The same substance is precipitated by alkalis from solutions of lead salts. It becomes  $\text{PbO}$  when heated to  $145^\circ \text{C}$ . The compound  $\text{Pb(OH)}_2 \cdot 2\text{PbO}$  crystallises in octahedra from a solution of basic lead acetate mixed with ammonia. Lead nitrate,  $\text{Pb(NO}_3)_2$ , crystallises in white octahedra from a solution...
