

Psychological Review Volume N . 23 (Paperback)

By Carroll Cornelius Pratt

Rarebooksclub.com, United States, 2012. Paperback. Book Condition: New. 246 x 189 mm. Language: English . Brand New Book ***** Print on Demand *****.This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1916 Excerpt: .of Chicago On the basis of an experiment in nerve division, Head et al. have formulated a theory of cutaneous sensitivity which antagonizes the older conceptions based upon the work of von Frey, Goldscheider, et al. Owing to the wide and enthusiastic acceptance of the theory in many quarters, it is believed that a critical review¹ may be of service to students of psychology. Head's first observations concerned the recovery of cutaneous sensitivity in patients in whom cutaneous nerves had been injured or severed. To obtain more reliable results, Head sectioned a branch of a cutaneous nerve innervating a part of his hand and forearm, and thoroughly examined the sensitivity of this part before and after the operation and during recovery. On a certain region of the area affected he found a total insensitivity when the skin was lifted away from the deeper lying tissues,...
